

Nigeria Malaria Burden Report (2000 – 2024)

A 25-year analysis of malaria incidence, mortality, and diagnostic trends — (WHO Global Health Observatory)

Malaria Mortality Rate per 100,000 Population (2000–2024)

Malaria Incidence Rate per 100,000 population (2000 - 2024)

Total Reported Malaria Cases by Year (2015–2024)

RDT vs Microscopy Positive Cases (2015–2024)

Suspected vs Tested vs Confirmed Cases (2015–2024)

NIGERIA MALARIA BURDEN - KEY PUBLIC HEALTH INSIGHTS

What the data tells us and what it means for policy.

THE STORY BEHIND THE NUMBERS

- Progress is real but fragile. 79 deaths per 100,000 remains unacceptably high.
- Transmission is the harder battle. Infections persist at 294 per 1,000 in 2024.
- Nigeria carries the world's heaviest malaria burden of 24 million cases annually.
- Diagnostics scaled, but accuracy lags. Only 1 in 11 suspects tested by microscopy.
